Some flowers show russet and gold, but as a whole it is probably the largest and brightest red double French sort. Compact bushy growth of about 12 inches and a fair bloomer. **Pkt. 25c.**

371 Giant Tetra Marigold. Giant Tetra is the result of doubling the chromosomes which govern heredity, in Guinea Gold Marigold, by using Colchicine, thus creating this new tetraploid Marigold. GRACILLIMA— New Cupid Zinnias

Cupid Zinnias—the smallest of all—ideal for cutting

Compact plants, about 1 foot tall, consist of a large number of slender branches which give the plant a well-rounded, bushy habit. Each of the numerous upright stems bears a miniature flower which hardly exceeds 1 inch in diameter. Plants are very floriferous; a mass of color through the summer and fall. They are as easy to grow as any Zinnias.

Cupid Zinnias are especially adapted for borders, bedding and rock gardens, and as a miniature cut flower. The long, slender stems, usually free from lateral branches, are ideal for cutting and may be used alone, as pictured above, or with long-stemmed flowers as well as with the short-stemmed small flowers ordinarily used in miniature vases.

76 Elf. Beautiful and fascinating shades of carmine.

77 Tiny Tim. Glowing shade of brilliant scarlet.

78 Pixie. Very attractive bright yellow. Showy.

79 Snowdrop. Pure clear white; good mixer.

Branching 2 Feet Tall, Flowers 2 1/2 Inches Across

Flowers are medium-sized, about 2 1/2 in. across, well rounded and freely produced on long stems; ideal for cutting. The compact, branching plants, which in an average soil grow about 2 ft. tall, keep on blooming from early midsummer until frost, making an attractive display in beds or borders, and yielding an abundance of long-keeping cut flowers for house decoration. In fact, the more flowers you cut, the more the plants will bloom. For those who prefer medium size flowers, especially for low bowls or vases, Cut-and-Come-Again Zinnias will be found most satisfactory.

249 Zinnias, All American Giants Mixed. A selection of our own. The individual flowers often are from 4 to 5 inches across, are of remarkable substance and are borne on long, strong, wiry stems. The strain, in our opinion, is superior to the Dahlia-flowered and the Giants of California. The flowers are larger, more densely made up, and of perfect form, while the colors are bright and more abundant. It should prove a very remarkable Zinnia for those desiring a real excellent strain for the growing of cut flowers. Special size Pkt. 25c; oz. \$1.50.

See page 52 for 16 illustrations of Zinnias in their natural colors.

Then on page 51 you will find our famous All Zinnia Garden.

No. 100 Baby or Lilliput Zinnias. Pkt. 15c.

The value of Zinnias as garden and cut flowers cannot be overestimated.

Easy to Grow Anywhere

Their ease of culture, long blooming season, together with their wide range of color and varied flower forms, make them one of the most popular of all annual flowers in the United States, Canada and Mexico. They are one of our leading specialties.

Zinnias are heavy feeders, and while they will grow in poor soil and under favorable conditions, they must have rich, well-fertilized soil and be watered freely during periods of dry weather if the finest flowers are wanted. Plant in full sun; they will not do well in the shade or near trees. Zinnias are hot weather flowers coming into their full beauty in mid-summer and continuing until fall. Flowers last for days when cut; different size flowers and colors for every purpose. After the soil has become thoroughly warm, sow seed in the open ground where plants are to bloom. Thin out large flowered varieties to stand 18 inches apart, smaller flowered types, 8 inches. Zinnias will bloom in about two months. The longest planting season of any annual. All of the different classes of Zinnias are easy to grow.

Fraser IMPROVED ASTERS *Bloom from May 'til October*

In few other plants have such strides been made in improvement of varieties, as has been among the asters. Asters bloom all through the summer and autumn from plants started in seed boxes under frames, beginning in January and continuing until May. This program will give blooming plants from May until October or later. If you do not care to go to this trouble, seeds may be planted in the open ground in April or May. You will want at least one portion of your garden set aside for the "Queen" of autumn flowers.

The outer petals reflex and the center ones curve gracefully inward. A magnificent Aster for both garden display and for cutting.

Our sun ripened seed represent this vastly improved strain and are easily grown and practically free from pests. They are perfectly hardy in the eastern states; we have known them to self-seed for five years as far north as Massachusetts. For cut flowers cut the blossoms or large buds in the morning.

Gorgeous GOURDS Galore

NEW and RARE ORNAMENTAL GOURDS, IN MIXTURES and SEPARATE VARIETIES

Gourds grow in most every section of the world, and we have gone to great expense to give our customers very selected and new varieties. Gourds will grow in the poorer soils because they do not go so much to vine and more to the fruit. They may be trained on trellises as ornamentals or used as ground covers. The fruit should be allowed to become ripe and hard before picking. After picking, scrub thoroughly clean and cover with varnish. It is becoming a great hobby all over the world to decorate by hand the hard shelled types.

CURE YOUR GOURDS AT HOME

Hard-shell gourds should be allowed to ripen on the vine. Do not pick them until the stem turns to brown wood. Then hang them up to dry further in some place such as a garage or other sheltered spot where they can get air.

They will begin losing their green color, large spots of brown will appear on the surface. Just let them alone until they are all brown and thoroughly dry.

After that they may be cut into shapes such as you desire, or used intact. They should be wiped off and covered with floor wax, varnish or shelac. Or soak them overnight in water, scrape off the skin, and polish while wet with a kitchen cleaner powder and dry wool. Gourds so treated will last indefinitely.

After drying they can be cut, decorated with paint, or designs may be burnt in.

PERUVIAN GOURDS

It is astonishing how these hard-shelled Gourds so utterly diverse in color, form, and size, can still be made to look so beautiful when carved and painted. We have a collection of six varieties in mixture from Peru with a shell one-half inch thick and very hard. It can be carved to three distinct depths, especially the Nzele type. The carved Gourds have a sale value as high as \$7.00 to \$10.00 each, according to the artistic carving of designs upon them.

Double St. Brigid

These brightly colored flowers resemble large poppies. They are very beautiful and wonderfully effective and come in a great variety of dazzling colors such as rose, red, blue, purple, lavender and other attractive shades, with black stamens in the center.

Our improved strains contain only the most select types and colors, and have long stiff stems, making them ideal for cutting.

Anemones thrive best and are most showy when the bulbs are planted close to-

gether. They should either be planted in beds, or in groups, to give a massed effect. At our new low prices, they should be planted in quantity, for wealth of bloom. 50c per doz.; \$3.50 per 100; \$30.00 per 1000.

Culture. For pot forcing, place six or more in a pot of proportionate size and handle the same as Tulips and Hyacinths, keeping them well watered at blooming time. For outdoor, they are suitable for borders, rockeries and mass bedding. Plant the tubers 3 to 4 inches apart, 1 inch deep, laid flat with the growing knobs upward. Soaking the tubers before planting hastens the blooming. In warm climates, free of heavy freezing, Anemones may be planted from early fall to early spring and several plantings will produce a continuous bloom in 2 to 3 months' time.

Fraser's CALIFORNIA DAHLIA SEED

Keen interest has been manifest of late in the growing of Dahlias from seed. From the large decorative sorts to the smaller bedding varieties you will find interest in producing dahlia plants from seed. Greatest Pleasure Was Growing Dahlias From Fraser Seed

"I believe the greatest pleasure and surprises in our garden activities last summer was growing Dahlias from seed. Seeds were purchased from Fraser & Son, seeds sown on April 15th in flats and set out the latter part of May, and first bloom was out about 112 days from date of seed sowing. Each plant produced a different color bloom(everyone of them gave us a thrill in watching the buds develop."—Mrs. Charles R. Rode, 217 Fountain Ave., Waukesha, Wis.

We predict a great future for this dwarf type of Salpiglossis.

STOCKS *Gilli Flower*

"The World's Best Double Stock"

All our California grown stocks bloom at least two weeks earlier than seed grown in any other section of the world. NOTE: The better strains of Stocks produce from 60 to 65 per cent of double flowers when all the plants survive and are used. For best results, sow seed thinly to permit uniform growth, use plants "as they come," and set closely enough in the beds to permit removal of the singles as they come into flower.

GIANT IMPERIAL BISMARCK STOCK

(Improved Bismarck, 2½ ft.)

This strain of Giant Ten Week Bismarck Stocks grow to a height of about 2½ feet, forming much branched plants that produce immense spikes of flowers measuring 12 to 16 inches long. They bear a high percentage of double flowers and are ideal for cutting.
